Legend: compatible see notes non-compatible

* Compatible with listed suffix (e.g. 18C815-C) and later revisions (e.g. D, E, F, etc.)

** The 16 pin connector must be connected to the radio even though there is no 16-pin connector from the vehicle. NOTE: the single CD radio only checks at vehicle power-up to see if there is a CAN device attached. Consequently, the iPod must be plugged in before the radio is turned on. The radio will see the iPod and you will be able to select SAT1 with the aux button, and the iPod will be active.

Please make certain your radio part number is listed in green in the table above. Just follow this easy radio part number identification process:

1. Turn ignition key "ON". Turn the radio on.
2. Press the AM/FM button on the radio.
3. Simultaneously press and hold the 3 and 6 preset buttons on your radio for 1-2 seconds (speaker test).
4. Press the preset 6 button within 5 seconds (radio config)
5. Press the tune up button (^)
6. Record the radio part number. It will look like the sequence of numbers and letters shown in the green boxes above.
