

Brandmotion iPod® Direct Connect Adapter

VEHICLE COMPATIBILITY GUIDE

- Brandmotion offers the highest quality iPod® solution for your Ford, Lincoln & Mercury vehicle.
- Our system works with most Ford, Lincoln & Mercury factory satellite-ready radios, with or without satellite receiver*
 - Provides total iPod menu control on Ford factory radio
 - Works seamlessly with factory steering wheel controls
 - Charges iPod while in use
 - Simple installation in most models
 - 100% plug-and-play. No wire splicing or alterations to your vehicle
- *Except navigation and AM/FM only radios.

Requirements

- Ford Factory Radio with CAN bus protocol
- Phase II connectors to head unit
- "AUX" button on head unit
- DELPHI SAT / SIRIUS receiver compatibility - with or without receiver installed

Functionality

The iPod Adapter is unavailable until an iPod is plugged into the 30 pin connector. Once the iPod is plugged in, it will charge the iPod battery if the vehicle is on, or the radio system is on. If the vehicle and radio are off, the iPod will enter a sleep mode to conserve the vehicle battery.

On first connection of the iPod, the Brandmotion logo will display to indicate that the iPod controller has taken over command and control of the iPod. Also on first connection of the iPod, if a song was currently playing on the iPod (in play or pause mode), the iPod will start off with that particular song in Album search mode. If no song was playing, then the iPod will start with the first Album and the first song on that album. The iPod adapter will always start in Album search mode.

iPod® Compatibility Check Process

Information from customer:

- Model
- Year
- Manufacture date of vehicle for 2007 F-150 & 2007 Mustang
 - Found around driver's door, on the door or the frame
- Satellite receiver - yes or no
- Radio part number
 - Turn ignition key "ON".
 - Press the AM/FM button on the radio.
 - Simultaneously press and hold the 3 and 6 preset buttons on your radio for 1-2 seconds (speaker test).
 - Press the preset 6 button within 5 seconds (Radio Config)
 - Press the tune up button (^)
 - Record the radio part number software level; (you will need to write the part number down).
 - Turn the radio "OFF" and then "ON" again by pushing the volume knob twice. (Ignition "OFF" is NOT the same).

Compatibility Check:

- Latest Compatibility Guide
 - Revision level of radio should be at or beyond the the earliest working revision level listed
- Manufacture date
 - For 2007 F-150 or 2007 Mustang only, vehicle manufacture date should be at or beyond Job 2 date

Caution:

- CAN bus must be present for adapter to function (either in the radio or radio / vehicle)
- Adapter was developed for radios manufactured by Delphi or Visteon with SIRIUS satellite compatibility
- ACP bus radios are not compatible
- Our product does not control issues caused by variations in the design, function or manufacture of Ford components or iPods
- Radio part number revisions may not cross-over from one model year to the next
- Steering wheel controls are functional on most vehicles - hold to seek for some models
- Satisfactory results are not guaranteed for radios that are not matched with the vehicle (swapped head unit).

Known issues:

- Edge steering wheel controls - seek function does not seek iPod songs
- 2007 Focus - iPod must be connected before power-up
- 2007 Audiophile & Shaker 500 in Expedition, F-150 & Mustang - up / down buttons not functioning (early revisions)
- 2006 F-250/350 functional only with single CD radio
- Video iPod causes "hiss" noise when backlight turns off

Known Issues

No factory satellite receiver available. Add as accessory only

Even though there will be no vehicle radio connection to the other side of the harness on the 16 pin connector, you must connect the 16 pin connector to the radio.

The single CD radio only checks at power-up to see if there is a CAN device attached. So, if the iPod is not connected to the interface when you turn on the radio, the iPod interface, and the radio CAN interface will go to sleep. Plugging in the iPod after power-up will yield nothing. If the iPod is plugged in before the radio is turned on, the radio will see it and you will be able to select SAT1 with the aux button, and the adapter works fine.

With the audiophile radio anytime you connect the iPod to the adapter, it will wake up the audiophile CAN bus. You do not have to worry about plugging in your iPod first.

Pioneer CD6 Audiophile THX Head Unit	7H6T-18C815-BF	Delphi	Yes
Pioneer AVN Prem Nav	7H6T-18K931-BB	Delphi	Sept release
Pioneer AVN Audiophile w/THX Nav	7H6T-18K931-AF	Delphi	Sept release

Known Issues

MKz - Steering wheel controls provide pre-set scanning only – no seek. iPod does not have pre-sets, so no seek function is present.

When you turn the car off with the iPod connected, and turn it on again, there is one report of no sound coming from the audio system. Disconnect the iPod; then the sound will come back - reconnect the ipod and everything will play fine.

Compatible with Pioneer Navigation radios – September availability

2006 - 2006.5 MY ZEPHYR UNIQUE
