

## **Control Processor, Electronic Door Lock**

- The electronic door lock control processor (14B001) is located behind the LH luggage compartment trim panel.
  - It contains a radio receiver that receives a signal from the keyless entry remote transmitter (15K601) through the electronic door lock control processor antenna.
  - It sends the appropriate command to the power door locks, the horn relay, the indicator flasher, and the anti-theft warning system if equipped.
  - The electronic door lock control processor is equipped with a battery backup which holds the programmed code in memory when the vehicle battery is disconnected.
-
