**Tom says:**

Hello Len. My name is Tom how can I help you?

**Len says:**

Hi, I own the FRPP Performance Calibration (ProCal) - M-9603-MGTB, The tech notes state that there is an approximate peak increase of 16hp. Recently a question has come up on a Mustang Forum as to whether the increase on the 2011/12 Mustangs (412 factory hp) is the same as on the 2013/14 which has 420hp. Do all years pick up the same increase or do the newer ones, rated at a higher hp, pick up less?

**Tom says:**

Good question! Let me check something, be right back.

**Tom says:**

HP/Torque gains are the same across the board

**Len says:**

For all years?

**Tom says:**

Correct.

**Len says:**

Thanks for your help. I'm very happy with the tune.

**Tom says:**

Anytime sir!

**Len says:**

Bye

**Tom says:**

Goodbye
