ASSEMBLY (Continued)

12. Install the mainshaft onto the clutch housing.
   - The notches on the shift rail should be pointing upward.
   - Align the shift rails in the bores.
   - The 3rd/4th shift fork has an oil deflector that will line up with an oil deflector on the inside of the case.
   - Make sure the 3rd/4th synchronizer blocking ring is aligned with the slots in the 3rd/4th synchronizer hub.

13. Using a jack and a block of wood, lift the mainshaft 13 mm (0.50 in) upward, then tilt the countershaft inward and install the countershaft.
   - Make sure all synchronizer assemblies are in the neutral position.

14. Install the case while holding the countershaft bearing in place. Install 2 opposing bolts.
   - Tighten to 32 Nm (24 lb-ft).

15. **NOTE:** Rotate the transmission so that the input shaft is pointing upward.

**NOTE:** Rotate the input shaft to seat the bearings.

Using the special tools, measure the input shaft end play by applying an upward load on the output shaft. Record the measurement.
16. Rotate the transmission so that the input shaft is pointing downward.

17. **NOTE:** Rotate the countershaft to seat the bearings.

Using the special tools, measure the countershaft gear end play by pulling upward on the countershaft. Record the measurement.

18. Remove the 2 bolts and lift the transmission main case off.
ASSEMBLY (Continued)

19. Using a jack and a block of wood, lift the mainshaft 13 mm (0.50 in) upward, then tilt the countershaft outward and remove the countershaft.

20. While holding the mainshaft, release the jack and remove the mainshaft and shift assembly.

21. Remove the input shaft.
22. Remove the front input shaft bearing cup and the front countershaft bearing cup.

23. Using the special tools, install the new input shaft seal.

24. Using the recorded end play measurements, select and install the appropriate shims to achieve the correct end play.

25. Install the front input shaft bearing cup and the front countershaft bearing cup.

26. Install the input shaft and the 3rd/4th synchronizer blocking ring.
27. Install the mainshaft.
   - The notches on the shift rail should be pointing upward.
   - Align the shift rails in the bores.
   - The 3rd/4th shift fork has an oil deflector that will line up with an oil deflector on the inside of the case.
   - Make sure the 3rd/4th synchronizer blocking ring is aligned with the slots in the 3rd/4th synchronizer hub.

28. Using a jack and a block of wood, lift the mainshaft 13 mm (0.50 in) upward, then tilt the countershaft inward and install the countershaft.
ASSEMBLY (Continued)

29. Clean the mating surfaces of the transmission main case and the clutch housing. Apply a bead of silicone rubber to the sealing surface on the clutch housing, then install the transmission main case.

30. Install the clutch housing-to-main case bolts.
   - Tighten the bolts in a star pattern to 32 Nm (24 lb-ft).

31. Install the lock pins.

32. Install the lock plate and the lock plate bolts.
   - Tighten to 31 Nm (23 lb-ft).

33. Install the 3 detents and the 3 detent springs.

ASSEMBLY (Continued)

34. Install the 3 detent plugs.
   • Tighten to 28 Nm (21 lb-ft).

35. Install the check ball.
   • Use petroleum jelly to hold the check ball in place.

36. **NOTE:** The thrust washer is positioned with the flat surface facing upward towards 5th gear. Install the thrust washer and the 5th gear needle bearings.

37. Place the 5th gear synchronizer blocking ring and the synchronizer hub on the countershaft 5th gear. Install the synchronizer springs and inserts.

38. Install the sliding sleeve on the synchronizer hub.
   • Align the pockets in the blocking ring with the struts in the synchronizer.
